As you may know, the national debt recently surpassed \$35 trillion for the first time and is projected to reach \$36 trillion by Election Day. Interest on the debt averages \$2.4 billion per day, or \$7,000 for every American household this year.

**Q18.** Knowing this, how important is it for 2024 presidential candidates to have a plan to address the rising national debt?

In fact, the national debt is on pace to reach \$57 trillion in just 10 years. We already spend more on interest on the national debt than we do on Medicare, national defense, infrastructure, education, climate, children or public health. In order to stabilize the debt, leaders will have to find savings in the budget by raising revenue or cutting spending - or some combination of both.

**Q19.** And knowing this, once again, how important is it for 2024 presidential candidates to have a plan to address the rising national debt - even if that plan includes spending cuts or raising taxes?

The leaders we elect this fall will face significant budget decisions. Candidates for president have put forward their ideas, including proposals to lower tax rates, to eliminate taxes on Social Security, to increase the child tax credit and more. Decisions on taxes impact how much money there is to spend on government programs and how much debt and interest costs the country takes on for the future.
